Her Money Was Gone!

An old woman who lived alone had kept nearly $2,000 00 in currency around her house for years. She was afraid of banks.

Last fall she became seriously ill, and——

No, she didn't die. But when she went to look for the cash it was gone! Fortunately some honest friends had found it while she was unconscious and had deposited it to her credit in a bank.

This woman has now decided that after all the bank is the safest place, and, besides, her money is not idle any longer. It is now earning 4 per cent for its owner.

Let us put your money to work for you.

THE FARMERS NATIONAL BANK

DEVELOPING A MARKET FOR OUR PRODUCTS

Business expansion is by no means haphazard. It entails study and research. That our country may win in the race for world trade the Department of Commerce keeps its agents abroad to search business opportunities. The details of their work are brought out in the seventh of a series of folders on Our Government which we are distributing each month. The complete series gives a highly interesting and instructive account of Our Government and its advantages to you.

Send your name and address and we shall mail you the stories issued previously and each pamphlet published in the future—one every month.

Court Proceedings

S. L. Ferguson qualified as special director of Board of Directors of the State Colony for Epileptics.

J. A. Bingham qualified as State inspector or automobile license.

W. S. Walton qualified as Constable of Stonewall district.

Dicie Hamlet was tried on an indictment of violating prohibition law. Fine of $50 and 30 days in jail. Sentence suspended.

G. T. Farrar appointed special Justice of the peace for Clover Hill district, and W. B. Thomas was appointed special constable for Southside district. Both of these parties live near Evergreen.

Com. vs. J. T. Scruggs continued to next term of court.

Brown & Smith vs. Florence C. Atwood, continued.

Com. vs. Henderson Vaughan violation of prohibition law. Jury's verdict of not guilty.

The stomach regulates the condition of the blood and is the fountain head of health or disease. Get your stomach right by taking Tanlac. Chas F. James.

ENTITLED TO HIS PENSION

Intelligent Dog Well Earned the Gratitude of His Master—Action Saved Child's Life.

Teddy, age twenty-two, is, his owner declares, the oldest dog in Ohio. He is now resting on his laurels, for he recently saved the life of one of the children of his master, Onias O. Swander, a farmer, near Toledo, Ohio.

It has been Teddy's duty and joy to accompany the Swander children to school, a mile distant, and bring them home again, daily. He has never been late on the job. On the way home from school recently, one of the little Swanders became ill suddenly and fell by the roadside. Teddy immediately started at his fastest pace for home and made such a fuss that members of the family accompanied him back along the road.

They found the child, unconscious, and extremely cold. He was hurried home and restored to health. The Swanders believe that Teddy's prompt action saved the child's life.

Mr. Swander immediately bought a dog license for his faithful dog. "I'll have no dog catcher chasing him. If anything should happen to that dog, my family would grieve as much as if he were one of them," declared Mr. Swander.

Teddy is half coyote and half Indian dog. He was bought from a band of Comanche Indians in Oklahoma 16 years ago.—Charles A. Henderson, in Our Dumb Animals.

COMFORT IN AIRPLANE CABIN

Great Contrast in Flights in Inclosed and Open Machines; as Described by Passenger.

I recently had the opportunity of making two airplane flights in the same day, the first in one of the completely inclosed transport machines, the second in a fighting machine which was developed in America during the last few months of the war and which has a speed of about 135 miles an hour. The force exerted by the air against any exposed surface is about three times as great at this speed as it is at 80 miles an hour.

During the first of these two trips the only complaint that could have been raised against conditions in the pilot's compartment would have been that it was rather close and we finally had to open a window in the side of the body to secure a little ventilation. One of the occupants of the cabin was wearing a soft felt hat, and not the slightest rustle of air disturbed the brim.

In the second flight, on the other hand, it was only with difficulty that I could lift my head far enough out of the gunner's cockpit to look over the side at the ground. The instant my head was raised above the top line of the airplane body, so that the wind got a chance at it, my hair threatened to be torn out by the roots.—Edward P. Warner in Yale Review.

Chorus Girl Worked as Housemaid.

A Parisian housekeeper who had long been without a servant succeeded the other day in engaging one who seemed very promising indeed. She entered upon her duties in the morning, and worked to her mistress' complete satisfaction. An early dinner was cooked and served excellently, but at 8:30 the new maid appeared in the drawing room with her hat on, and explained that she had to go out, as she was in the chorus at a music hall and was sure to be fined if she arrived late. Apparently she was quite prepared to continue her two jobs without regarding them as incongruous. Owing to a lack of modernity in the mistress' ideas, this interesting experiment was not continued.—From the Continental Edition of the London Mail.

Cures Wrought by "Sleep-Baths."

Among the many wonderful cures which the war has produced is the "sleep-bath."

It is to be had on the thousand-acre estate at Enham, Hampshire, where many of the disabled men are being treated. Practically every kind of bath is available there, but the big "sedative bath" has worked the most miracles.

The patients lie in hammocks, while water flows over them. The hammocks are immersed, and the water is kept about the temperature of the body. The gentle flowing motion has a most soothing effect upon the nerves.

Provided the man has not been pronounced incurable, any disabled ex-soldier may apply for treatment through his local pension committee.

Human Fly Says It's Safe.

Polley, the human fly, who climbed the 37 stories of the Woolworth building in New York, says climbing tall buildings is just a trick of balance. It took him nine years to acquire it, but now that he has it he believes his way of making a living is as safe as any other. He recently told a reporter for Capper's Weekly he had never fallen, except on one occasion when a "fly" above him fell and knocked Polley to the ground. Polley doesn't smoke, drink or indulge in any habits that might injure his health. He declares he takes no foolish chances and that he never becomes dizzy.

Broke,

"Hi, there, sir!" shouted a Florida landlord to a departing guest who was rushing for the train, "you've dropped your pocket book."

"All right," shouted back the guest without stopping. "I've no further use for it."—Boston Transcript.

Lawn Parties

The Oakville Community League will have a lawn party Saturday evening, June 10th, beginning at 6 o'clock, also the play entitled "The Miller's Daughter, or Bound in Honor" will be presented at the Oakville school by the Spout Spring school, beginning at 8 o'clock, lasting two hours. Admission 15 and 25 cents, reserved seats 10 cents extra. Everybody come and enjoy the occasion.

The young men of Spout Spring will have a lawn party at Spout Spring school house on the evening of June the 10, for the benefit of their ball team.

Miss Rachel Ferguson is home from R M. W. C. for the summer.

MAKING BAD MEN GOOD

Effective Revolutionary Method Use by the Salvation Army in Prison Work.

During the last year The Salvation Army has found employment and given financial aid to 2,800 discharged prisoners. The old story of the man who cannot find a job because he has "done time" is a thing of the past, for The Salvation Army is always willing to find him employment. The old tale of the convict who is driven back to crime through poverty and friendlessness is out of date, for The Salvation Army is daily applying its theories of practical Christianity to the prison problem.

In 383 prisons and reformatories during the last year, 5,000 religious meetings were held under the auspices of the Salvation Army. They were attended by more than 260,000 prisoners and more than 9,500 men and women declared their intention of becoming self-respecting and useful members of society.

Nor does The Salvation Army confine its prison activities to convicts and ex-convicts. The entire family is frequently cared for and protected by The Salvation Army. Food is provided where there is want, shelter is given to the homeless, and a spirit of forgiveness is instilled in order that the family may be ready to welcome the transgressor on the day of his release.

In connection with the work of The Salvation Army, both inside and outside of the prison gates, some of the most remarkable stories might be told. Among the conversions made during the last year are some of the most notorious criminals in the United States—men who were old-timers hardened offenders who had spent the major portion of their adult years behind bars. And in almost every instance the conversion has been sincere. Out of the scores placed on parole to The Salvation Army from every State and every country during the last year, only eight per cent. of the entire number failed to make good, the remaining ninety-two per cent. report regularly to The Salvation Army once each month and are quickly becoming hard-working, self-respecting men and women.

Among the recent activities of the Prison Department of The Salvation Army is the Lifer's Club, an organization composed exclusively of the 152 men who are serving life terms in the penal institutions of this country. The purpose of the club is to give the lifer something to occupy his mind—something to keep him in contact with fellow prisoners in other institutions and with the outside world. The officers of the organization are lifers, the members are lifers, and it will not be long before a magazine, edited by lifers, will be circulated by The Salvation Army through every prison in the United States, as a message of cheer for the present and hope for the future.

Red Cross Gives $310,000 to Aid 'Clean-Up' Drive

An appropriation of $310,000 for Red Cross work in connection with the "clean-up" campaign instituted by the Government to bring the claims of all disabled service men who are entitled to Federal aid before the proper government bureau for action, has been made by the American Red Cross. The Executive Committee of the American Red Cross in making the appropriation authorized the appropriation of $35,000 of this sum to the American Legion to defray the expense of the Legion representatives assigned to the various districts of the Veterans Bureau.

The remainder of the appropriation was authorized for apportionment among the several Divisions of the Red Cross for carrying on that part of the "clean-up" work that falls directly upon the Red Cross organization.

Card of Thanks

We wish to extend our many thanks to our friends and neighbors for kindness shown us at the death of our dear wife and mother also for the beautiful flowers and cars.

J. C. O'Brien and Family.

Appomattox Agricultural Club

The Appomattox Agricultural club held a call meeting on Friday, May 19th, president in charge, programe was rendered after which a motion was put before the club that we send a delegate to Blacksburg this summer and the motion was unanimously carried. The following committee was appointed for the purpose of deciding in what way the money should be raised. Frances Gordon, Alice Harwood and Kennard Gills.

MODERN DAY MIRACLES

American Chemists Have Accomplished the Wonders Which Ancient Chemists Strived for by, the Utilization of Coal Tar By-Products

(Told in Eight Sketches)
By JOHN RAYMOND

No. IV
THE ALCHEMIST'S DREAM

Through the literature of the ancients runs the absorbing story of the alchemist's patient search for the touchstone which would transform all base metals into pure gold, and the never-ending quest for the elixir which would restore youth to the aged and would cure all human ills. The alchemist, driven from cellar to garret and often put to death, had an elemental knowledge of chemistry and vaguely dreamed that it could be made to perform wonders.

It was Ben Jonson's alchemist, Subtle, back in the early seventeenth century who planned "to change all that is in my house to gold, and early in the morning to send to all the plumbers and pewterers and buy their tin and lead up; and to Lothbury for all the copper." And more than that, by means of this magic elixir, in eight and twenty days he planned to transform an old man of four score into a prattling child.

Certainly, chemistry has not succeeded in performing these marvels. The philosopher's stone still is an unknown quantity to science, buried, perhaps, with the pot of gold at the rainbow's end, and the elixir of youth is as deeply hidden as on that far-off day when De Soto set forth so bravely from Spain to find it in the new world. But chemistry has accomplished wonders by the utilization of coal tar by-products which contribute to every phase of our daily life. Take the fairy glass of the chemist and look into this rather uninteresting substance—coal.

We put a kettle of it over a fire and we see leaving at various times what the chemist calls the Crudes-benzone, toluene, xylene, napthalene, phenol, anthracene, carbazol, and some others. But these are the most important. Some are clear liquids, some are beautiful crystals, but all are brought out of the black coal tar by the magician's wand, which is simply fractional distillation; that is, catching and condensing the vapors given off at various temperatures.

Now, what of the crudes? Add nitric acid, or any one of hundreds of chemicals, and either heat or cool as the case may be, and we get a host of other compounds described as intermediates. Although some of the crudes and many of the intermediates are useful as such, the real development begins with the chemical treatment of the intermediates. With many of these intermediates, one line of treatment will produce drugs, another high explosives, another poison gases, still other perfumes, food flavors and photographic materials. Some have varying peace and war time uses without further treatment. It should be noted that some of these crudes require as many as fifteen manipulations to produce a given compound and in each manipulation a by-product is produced which again must be made into something useful in order to avoid waste.

It is because of this treatment and retreatment of coal, crudes and intermediates that it is so easy to convert a dye plant into a factory for the production of high explosives or poisonous gases almost over night.

Germany was indeed farsighted, back in 1859, when she took advantage of Perkin's discovery, and began the development of a gigantic dye industry so that she might never be without the crudes and intermediates so essential to success in war or peace.

Germany developed the synthetic dye industry, just as she developed other industries, to create employment and wealth for her millions. But through these developments she learned the value of chemistry, of chemicals, and of chemists themselves. She realized early how dependent her peace development was on chemistry and she soon saw the value of chemical industries to war. Germany saw that the manufacture of dyes required much chemical research and also that dye making made use of the waste products from the coke ovens, themselves a necessity to her iron and steel industry. She saw its value in the production of explosives, gases and fertilizers for her fields. This foresight gave Germany a forty year start on the United States, and the rest of the world.

(Released by the Institute of American Business, New York)
